1. The following is an examiner's statement of reasons for allowance: the closest prior art JP9291227 teaches a primer coating composition useful for priming the surface between an organic glass and a silicone cured hardcoat layer wherein the primer coating comprises a urethane elastomer and metal oxide fine particles surface treated with organoalkoxysilane hydrolyzate (Abstract), however JP'227 does not teach or render obvious that the urethane elastomer is a self-emulsifiable emulsion of a linear polyurethane having a pendant carboxylic acid group and no crosslinked structure between polymer chains. Further, Mase et al teach a plastic lens formed by laminating, in order, a plastic lens substrate, a primer layer, a hardcoat layer and an anti-reflection layer, wherein the primer layer is formed from a primer composition comprising a polyurethane and a metal oxide compound in a solvent such as propylene glycol monoethyl ether. However, Mase et al do not teach or render obvious that the polyurethane is a self-emulsifiable emulsion of a linear polyurethane having a pendant carboxylic acid group and no crosslinked structure between polymer chains. The Examiner additionally notes that the two references cited in the European Search Report and submitted on the IDS filed Sept. 29, 2004, (EP 0 922 971 A and EP 0 791 636 A) also fail to teach the instantly claimed composition comprising a self-emulsifiable emulsion of a linear polyurethane having a pendant carboxylic acid group and no crosslinked structure between polymer chains with an inorganic sol and organic compound as instantly claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
